Exam : **C2010-509**

Title : IBM Tivoli Storage Manager
V7.1 Fundamentals

Vendor : IBM

Version : DEMO

NO.1 What can be done so that a data center can maintain highly available restore and recovery capabilities across data centers?

- A. Use node replication.
- B. Use active-data pools.
- C. Put the storage pools on shared SAN volumes.
- D. Use Disaster Recovery Manager to automate a server rebuild if needed.

Answer: D

Explanation:

The Disaster Recovery Manager (DRM)

The TSM(Tivoli StorageManager)Disaster Recovery Manager is a feature that is included with TSM Extended Edition and it is the part of the TSM application that can be used to assist with the management of off-sitedisaster recovery.

Reference:A Brief Introduction to IBM Tivoli StorageManager Disaster Recovery Manager

NO.2 Which level of IBM Tivoli Storage Manager administrator authority includes the ability to restore node data from a remote system to a local system?

- A. storage
- B. system
- C. operator
- D. client access

Answer: C

Explanation:

The Backup Operators group allows users to back up and restore files regardless of whether they have read or write access to the files. Since this group has a limited set of user rights, some functions are not available to members of the Backup Operators group.

NO.3 There is a requirement to provide hot backups for a physical machine running Microsoft Exchange Server 2010. What is a prerequisite?

- A. Update the VSSPOLICY in the dsm.opt file to specify a management class.
- B. Install IBM Tivoli Storage Manager for Mail on the same system as the Exchange server.
- C. Update power shell cmdlets to include the IP address of the IBM Tivoli Storage Manager server.
- D. Stop the Exchange host controller service, start the incremental backup, and start the Exchange server.

Answer: B

NO.4 A storage pool contains backup data from several clients and has collocation by node enabled. If collocation is disabled by setting collocation to No, what is the immediate effect on files already stored in the storage pool?

- A. There is no immediate effect on files that are already stored.
- B. A reclamation process is immediately started to remove the collocated files.
- C. All collocated backup data is deleted, and clients are required to perform a full backup.
- D. A migration process is automatically started to move the collocated files to the copy pool.

Answer: A

NO.5 What is compatible with client-side deduplication?

- A. SSL
- B. NDMP
- C. encryption
- D. LAN-free backup

Answer: B

Explanation:

When you configure client-side data deduplication, the following requirements must be met:

- *The client and server must be at version 6.2.0 or later.
 - *(not D)Client-side deduplication cannot be used in combination with LAN-free backups.
 - *(not C)Files that are intended for deduplication must not be encrypted. Encrypted files and files from encrypted file systems cannot be deduplicated.
- Etc.

NO.6 Which two types of server tasks are shown in the Operations Center?

- A. active
- B. db reorgs
- C. encrypted
- D. completed
- E. missed schedules

Answer: A,E

Explanation:

A:TSM Servers The status indicator shows whether the Tivoli Storage Manager servers that are managed by the Operations Center are available to provide data protection services to clients. E:TSM Clients A client is considered to be at risk if a problem occurs during its most recent scheduled backup, or during a backup that starts within a specified time interval. The term backup also includes archive operations for TivoliStorage Manager for Enterprise Resource Planning clients. Use the information that is shown in the TSM Clients section to check for failed or missed backups and to determine whether backup schedules are running as expected.

NO.7 What does the command query inclexcl show?

- A. Details of which files are backed up.
- B. The specific order in which files are backed up.
- C. Which users have restore privileges for specific files.
- D. The include/exclude statements in the order they will be processed.

Answer: D

NO.8 What additional level of security can be used during the transfer of data from client and server?

- A. encryption
- B. compression
- C. deduplication
- D. data shredding

Answer: A

Explanation:

You can encrypt the data as well.
